

# SOLID

## ADVANTAGE

Serving the LNG Market

# SOLID PRODUCTS

EVRAZ North America is a vertically integrated steel producer uniquely positioned to meet the needs of liquefied natural gas (LNG) customers – from drilling and transmission to storage. We safely manufacture large and small diameter line pipe and oil country tubular goods (OCTG), as well as plate for storage tanks and pressure vessels.

Throughout the process, whether it's product development and testing at our technology centers, steelmaking, rolling plate and coil, or making pipe and OCTG, we are focused on developing and manufacturing the highest quality products that provide our gas and oil customers with a competitive advantage.

## Large and Small Diameter Line Pipe

EVRAZ pioneered large diameter line pipe in North America and today we are its largest producer. In fact, we are the only producer in North America that can manufacture LD pipe that is 100% "Made in Canada." Our ISO 9002 certified facilities have the ability to produce DSAW (straight seam and spiral) and ERW line pipe in grades from x52 up to x100, pipe diameters from 2 to 60 inches, and wall thicknesses up to 1 inch. In fact, we've made more than 2,000 kilometers (1,243 miles) of x80 line pipe.

EVRAZ offers state-of-the-art high performance powder coating (HPPC) and three-layer coating and lining services. In addition, we have wide-ranging expertise in logistics, off-loading, and storage management systems.

## Oil Country Tubular Goods

We also manufacture API-compliant ERW casing and tubing, seamless casing, and coupling stock to support gas and oil drilling. Our QB2 premium connection has been proven in the field for over 20 years and we have added a new semi-premium connection – QB1-HT. Both provide the reliability and flexibility required in today's challenging drilling environments and were developed with the active involvement of industry in testing and field conditions.

## Plate for Storage Tanks & Pressure Vessels

EVRAZ steel plate is used in the most demanding tank and pressure vessel applications. Our plate mills are capable of producing plate from 0.1875" to 5.0" thick and up to 135" wide. With a variety of yield strengths and custom sizes available on short lead times – even on small orders – tank designs can be optimized for reliability, weight, and overall cost.

Largest North American producer of large diameter pipe

Largest producer of OCTG pipe in Western Canada

Leading North American producer of steel plate

Largest metals recycler in Western Canada and Colorado

## SOLID ADVANTAGE

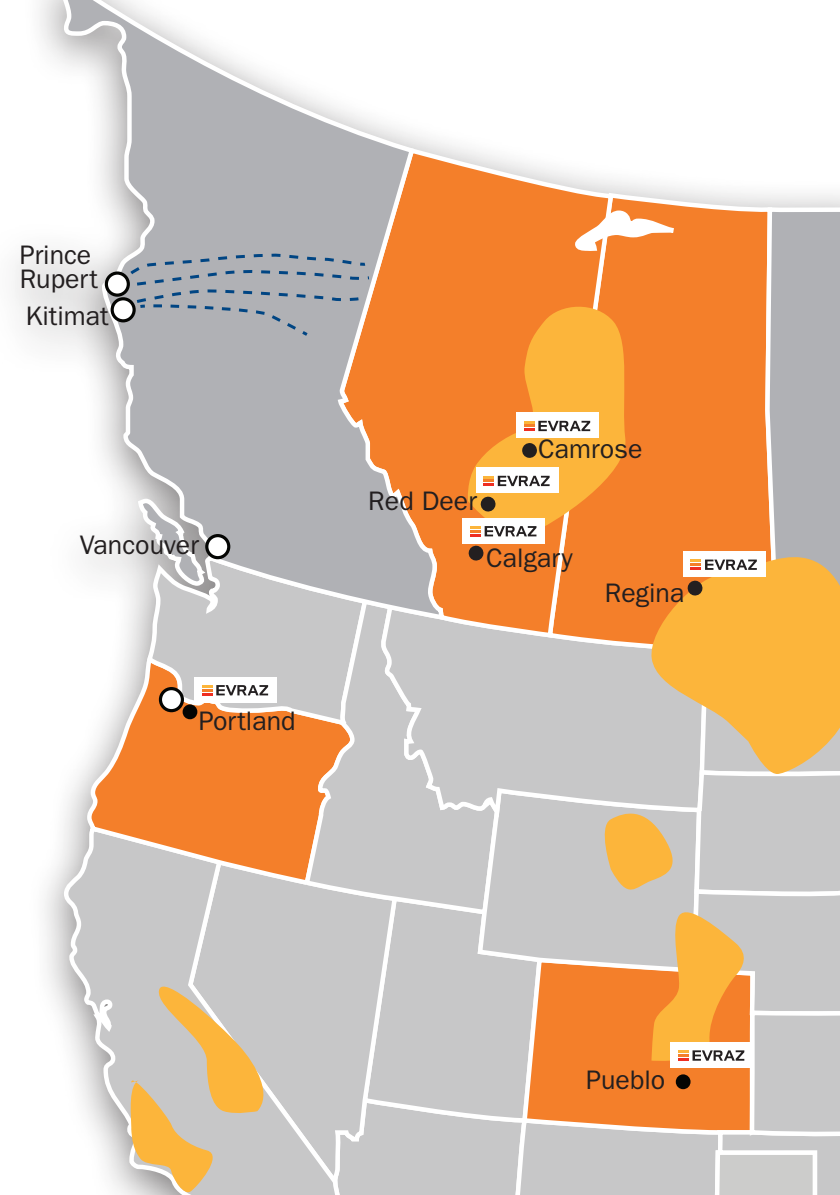

The EVRAZ advantage goes beyond our product offerings to the location of our manufacturing facilities in close proximity to western Canada energy hubs. With 58 years of experience in the oil and gas transmission markets, EVRAZ has produced over 56,350 kilometers (35,000 miles) of project pipe. We make our products sustainably, recycling millions of tons of scrap metal each year.

## TECHNOLOGY EXPERTISE

The EVRAZ Research Center in Regina, founded in 1981, boasts an extensive team of metallurgists, scientists and engineers dedicated to product development and full-scale mechanical, tensile, collapse, corrosion and weld testing, as well as microstructure and finite element analyses and process simulation. We also have state-of-the-art technology centers at our Portland and Pueblo facilities where we work closely with our customers to meet the ever changing and increasingly challenging demands of the oil and gas industries.

## COUNT ON EVRAZ

Major pipeline producers have counted on EVRAZ for decades to manufacture reliable and high-quality tubular products. You can count on our 4,500 team members across Canada and the United States to safely and efficiently supply the products you need to move LNG from field to port.

Strategically located in the heart of the energy sector

## SAFETY IS OUR TOP PRIORITY

We firmly believe that nothing is more important than the safety of our team members. From 2010 to 2013 we've improved our lost time injury frequency rate 80% and we won't stop until we reach our goal of zero injuries.
